Edit Handout Content

Handout content can be typed directly on the page using line returns for spacing as shown below.

Handout content can also be put into **text boxes** that can then be arranged on the page with more freedom and stylized.

To start a text box, click the **Text Box** button in the toolbar. A text box will appear on the handout page in which you can begin to type your new text.

Work of Leaders	
Take notes on what you learn about the Work of Leaders	6. Object Placement
Write an example of	 Inline (moves with text) Floating (doesn't move with text) In background Background objects are selectable
	Object causes wrap
	Text Fit

The text box may be limited as to where it can be placed and how it interacts with the rest of the page content. To change these settings, open the **Wrap Inspector** and select one of the **Object Placement** options. "Inline" and "Floating" placements can also be selected directly from the toolbar if the text box is highlighted. To be able to move the text box freely on the page, deselect the **Object causes wrap box** as shown above. Then you can grab the text box with your mouse and drag it where you wish on the page.

To apply styles to the text box, open the **Graphic Inspector** and use the tools to change text box fill, strokes (outlining), shadows, reflections, and opacity.
