

Insert Slides from Other Presentations

You can customize your Everything DiSC program by adding slides from your own presentations, or you can insert Everything DiSC slides into your existing programs.

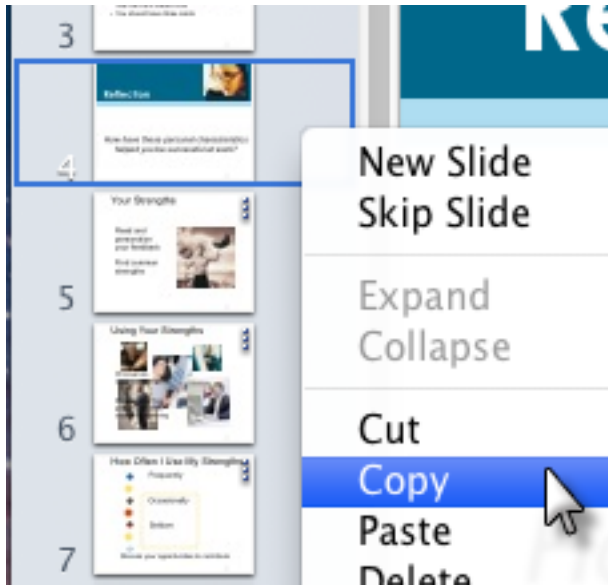

Open the presentation that you want to customize with slides from another presentation. Determine where you want the inserted slide to be located, and click the slide before this location.

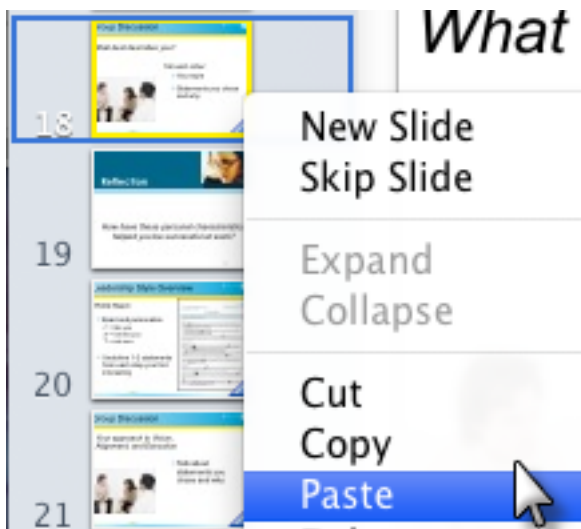

Use your computer's browser to locate and open the presentation from which you want to use slides.

Locate the slide(s) you want to use in your customized presentation, right-click on the slide(s) in the navigation pane, and select **Copy**.

Return to the presentation you are customizing. Right-click on the slide you marked as the location and select **Paste**.

Edit the slides you inserted as needed.
